***Detailed Office Action***

***Status of Claims***

Claims 1-4 are pending. Claims 1-4 are considered for examination in this office action.

***Specification***

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

***Claim Objection***

Claim 2 is objected to because of the following informalities: Each claim ends in a period. Appropriate correction of claim 2 is required.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The reaction scheme, in claim 2 is indefinite because some of the parameters like “rt”, and order of the reagents used are to be defined.

It is respectfully suggested that applicants’ amend the claim by describing the reaction scheme in words.

***Allowable Subject Matter***

Claims 1,3 and 4 are allowable.

Claims 1,3, and 4 would be allowable if claim 2 is rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter:

The closest prior art, by Armin et al, (Journal of American Chemical Society, Vol. 113,1991,3935-3941) teach the Regioselective coupling of ethynylcyclopropane units: Hexaspiro [2.0.2.4.2.0.2.4.2.0.2.4] triaconta-7, 9,17,19,27,29-hexayne wherein, he teaches the synthesis of 1,4-dicyclopropylbutadiyne starting from ethynylcyclopropane. However, the prior art fails to teach the process of making 1,4-dicyclopropyl-1, 3-butadiyne in the presence of cuprous chloride and tetramethylethylenediamine, which are the key components of the instant invention.
